

BEAR MCGILLEM for
HAVELOCK CITY COMMISSIONER

Havelock native. Running because the city stopped answering its people.

I was born in Craven County and came home to Havelock in third grade. I left for the road for a while, but I always came back home. I'm 42, and I've paid taxes to this city since I was 14. Twenty years in construction repairing homes here. Five years as a CNA caring for Havelock's parents and grandparents. I hold a CDL-A with Hazmat and Tanker endorsements, and I'm earning my degree in Cybersecurity at Craven Community College, where I compete at the top of national tournaments. My mother is a retired Marine Master Sergeant who served her final tour at Cherry Point.

I'm not a politician. I'm a working man who learns what he doesn't know. For eighteen months I've been writing City Hall about noise enforcement and commercial truck traffic on a school walking route. Most of those emails were never answered. That silence is why I'm running.

MY PLATFORM — FOUR COMMITMENTS

- 1 NCDOT rules applied where they belong.** Residential corridors — especially school walking routes — are not freight bypasses.
- 2 Enforce the ordinances we already have.** We don't need new laws. We need the existing ones to actually work.
- 3 Police department training** that meets the standard the people of Havelock deserve.
- 4 Communication.** Every constituent email answered within two weeks, barring unforeseen life events. If the answer is one you don't want, you'll hear it from me directly. The silence ends.

WHAT THE PUBLIC RECORDS SHOW

81 noise complaints to Havelock PD across 4 records periods	6 times the department took any enforcement action	0 actions in the two most recent records periods

WHAT THE RECORDS SHOW

Havelock noise enforcement and McCotter Boulevard, by the numbers.

The same two weeks officers wrote 45 citations and warnings, noise complaints produced zero citations.

During Dec 22, 2025 – Jan 4, 2026, Havelock PD received 9 noise complaints. They produced one criminal summons — and **zero citations**. In that same window the same officers issued **45 citations and warnings across 29 offense categories** — **16 of the 40 citations for paperwork** (expired tags, inspection, insurance). The noise standard requires no measurement and no investigation to enforce. Resource constraint does not explain it.

Dec 22, 2025 – Jan 4, 2026. Havelock PD records, obtained under N.C. Public Records Law (N.C.G.S. § 132).

The noise — measured on McCotter Boulevard

- **More than 150,000 A-weighted sound readings** logged over seven months — backed by **400,000+ C-weighted readings** capturing the low-frequency rumble.
- **About 1 in 10 A-weighted readings** — more than **17,000** — broke Havelock's own legal limit. Peak: **102 decibels**.
- More than **4 in 10** stayed above the EPA's safe residential level.
- Across 4 records periods: **81 noise complaints, 6 enforcement actions** — zero in the two most recent periods.

And the trucks — a second problem on the same road

- McCotter is a residential street with no continuous sidewalks — a school walking route for as long as I've been alive, and a **long-standing school bus route**.
- After the US-70 Havelock Bypass opened **Dec 19, 2025**, commercial truck traffic on McCotter jumped. A resident count documented **90+ trucks in a single 4-hour window** — last year, that same stretch saw about **20 a week**.
- On **June 3, 2026**, a commercial dump truck collided with a civilian SUV on McCotter. **Two viable alternate routes** exist — Roosevelt Boulevard, and US-70 at NC-101 — about one extra minute for a driver paid to drive.
- If the trucks stay, McCotter needs what a freight corridor requires: **traffic calming, noise abatement, and pedestrian protection**. Protect the residents, not just the route. NCDOT has been contacted; the traffic continues.

Eighteen months of emails to the Mayor, the Board, the Police Chief, and the Patrol Captain — most never answered. That gap is what I'm asking you to help me close.

Methodology: Sound measured with a Benetech GT1355B Type 2 meter, sampled once per second. Ordinance-exceedance figures use A-weighted readings — the legally applicable metric — with violation events counted only when sustained at least 2 consecutive seconds above threshold; C-weighted readings are corroborating. Havelock City Code: 65 dB day (7am–9pm), 55 dB night. EPA residential reference: 55 dB day / 45 dB night. Enforcement figures obtained via N.C.G.S. § 132 Public Records Law requests. Period totals count any documented enforcement action; the Dec 22–Jan 4 breakdown counts formal citations. Full source data available on request. bearforhavelock.com · HavelockAccountability@proton.me
